

LTTng-tools - Feature #599

second snapshot not to gather data from the previous snapshot (no repeated events)

07/21/2013 06:41 PM - yin sun

Status: Confirmed	Start date: 07/21/2013
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category:	Estimated time: 0.00 hour
Target version: Wishlist	
Description be able to specify portion of buffer in snapshot mode. the purpose is to let the second snapshot only take "new" data comparing to the previous snapshot. This is useful to "tail -f" like function.
